ML1612R

Coil Ram

ML1612R Coil Ram

The Meclift ML1612R with coil ram attachment is a superior combination for steel coil handling. With the coil ram it is possible for the ML1612R to handle coils up to 16,000 kg. The ML1612R's compact size allows loading to begin from the back of the container since it can drive inside the container with the load. By exploiting its 2,500 mm reach, it is also possible to load the container from the outside.

The positioning of the cargo is made easy by the side shift feature. For handling heavier loads Meclift also offers the ML3012RC machine with coil ram attachment. The structure of the boom and the lifting carriage makes it possible for this type of machine to reach loads inside a container.
