ML1612R

# Double Forks System

## ML1612R Double Forks System

The Double Forks System for the ML1612R makes cargo handling very efficient. It is a special attachment which offers a variety of benefits when loading and unloading containers. With these double forks you can handle, for example, 4 Euro pallets or similar load at the same time. This makes container or trailer loading very efficient as you can have, for example, a 20 ft container fully loaded with only 2 lifts.

The weight of the load is not a problem, as the double forks can handle the same maximum load of 16 tons as the machine. The basic side shift features of the machine are still available, so the positioning of cargo inside a container is easy. Because the double forks use the same fixing points as the normal forks, switching between normal and double forks is rapid.

### Dimensions:

Height:	<b>1,350 mm</b>
Length, fork:	<b>2,400 mm</b>
Length, assembly:	<b>2,570 mm</b>
Width, fork pair:	<b>570 mm</b>
Width, single fork:	<b>200 mm</b>
Thickness:	<b>75 mm</b>
Lifting capacity, single fork:	<b>8,780 kg</b> at a load center of 600 mm
Lifting capacity, total double forks system:	<b>16,000 kg</b> at a load center of 1,200 mm (which is the lifting capacity of the ML1612R)
Weight, fork pair:	<b>850 kg</b>
Weight, total double forks system:	<b>1,700 kg</b>

**ML1612R  
enables  
loading of  
containers  
at one  
stroke.**
